

PRODUCT GUIDE — FOR PARTNERS

What Is AI Automation? A tireless digital employee.

What it is

AI automation means using artificial intelligence to handle tasks and workflows automatically — the repetitive, time-consuming work that normally ties up a person. Think of it as a tireless digital employee that works 24/7, never forgets, and never sleeps.

How it works

1

AI Assistant

Answers customer questions instantly

2

Call Receptionist

Picks up, routes & books calls

3

Lead System

Captures & follows up every lead

4

Workflow Bots

Invoicing, data entry, reporting

Who it's for

- ▶ Restaurants — reservations & orders
- ▶ Clinics — appointment booking
- ▶ Real estate — instant lead follow-up
- ▶ Trades — missed-call text-back

How to pitch it

- “ It works 24/7 — every lead and call answered, even at 2am.
- “ It never misses a follow-up, so the business stops leaking revenue.
- “ It scales the business without hiring more staff.

Common objections

“Is this just chatbots?” — No — it's any repetitive task: calls, follow-ups, scheduling, invoicing, reporting and more.

“Will it feel robotic to my customers?” — Modern AI is natural and on-brand — most customers can't tell, and they love the instant response.

Refer a business that needs this.

You earn 10% of their first invoice (min \$50).
