

AI Automation

Work smarter, not harder.

What it is

Custom automated workflows that quietly handle a business's repetitive work — lead capture, follow-ups, data entry, scheduling, reporting — using AI plus the tools they already use. It runs 24/7 so their team stops doing robot work.

How it works

1

Audit

We find the repetitive, time-sucking tasks

2

Map

Design the ideal automated workflow

3

Build

Connect their tools + AI, end to end

4

Run

Deploy, monitor, and refine — 24/7

Who it's for

- ▶ Owners drowning in manual admin
- ▶ Teams repeating the same task daily
- ▶ Service businesses with slow lead follow-up
- ▶ Anyone copy-pasting between apps

How to pitch it

- “ If you do a task more than twice a week, we can probably automate it.
- “ It runs while you sleep — leads get answered at 2am.
- “ We don't replace your team; we free them for the work that grows the business.

Common objections

“Sounds complicated to set up.” — We build and maintain the whole thing. The client just enjoys the time back.

“Will it replace my staff?” — No — it removes the busywork so staff focus on customers and revenue.

Refer a business that needs this.

You earn 10% of their first invoice (min \$50).
